

Credential Management Solution For Enterprise

How can Enterprises overcome Credential Management challenges to boost efficiency and enhance security?

CloudGate's Credential Management automates processes, integrates with global PACS, offers NFC/BLE workflows, and provides real-time reporting for improved security and operational efficiency.

Enterprise Credential Management Challenges

The Enterprise industry grapples with significant pain points in credential management, affecting efficiency and security. Long HR wait times for onboarding new employees and contractors create bottlenecks, delaying the integration of vital workforce members into the organizational environment. Questionable credential deactivation policies pose a security risk, as inadequate procedures can lead to unauthorized access long after an individual's association with the company has ended. This issue is compounded by overspending on credentials, driven by incomplete records that fail to track the issuance, return, or cancellation of credentials accurately. Furthermore, the industry faces a limited path to mobility, restricting the seamless transition of employees and contractors across different roles, locations, or projects due to rigid or outdated credential management systems. These challenges collectively hinder operational efficiency, inflate costs, and compromise security within the enterprise sector.

CloudGate Solution Benefits

The CloudGate Credential Management solution addresses the Enterprise industry's challenges through a series of innovative and efficient features. By automating the credential process, CloudGate drastically reduces HR wait times for onboarding, ensuring new employees and contractors are integrated quickly and seamlessly. Its full integration with 23 global Physical Access Control Systems (PACS) ensures a wide compatibility range, enhancing security and accessibility across various platforms. The solution embraces modern technology by supporting NFC or BLE credential workflows, compatible with Apple, Google, and Samsung Wallets, facilitating a more mobile and flexible credential management approach. CloudGate's approach to credential management extends beyond traditional door access control, incorporating credential-based workflows that enhance operational efficiency and security protocols. Active and Live Time reporting, along with Active Dashboards and usage reports, provide real-time insights into credential usage, improving oversight and decision-making. Wearable credential options reduce the risk of loss and policy breaches, offering a more user-friendly and secure alternative to traditional credential forms. Lastly, Cross PACS functionality ensures that CloudGate's solution is versatile and adaptable, capable of operating across different access control systems without compromising functionality or security. Collectively, these benefits offer a comprehensive solution to the credential management pain points in the Enterprise industry, enhancing efficiency, security, and oversight.

About CloudGate

CloudGate by Soloinsight is an advanced platform designed to enhance workplace experience through the automation of the management and security of physical and cyber identities in buildings. It is a comprehensive solution aimed at converging and orchestrating physical security, HR, Environmental Health and Safety (EHS), Facility Management (FM), IT, and cyber domains into a single, secure automated system for both Logical (Identity and Access Management - IAM) and Physical Identity and Access Management (PIAM) and governance. The platform is trusted by various prestigious organizations and integrates seamlessly with multiple Physical Access Control Systems (PACS) and cyber identity solutions to manage the identities and credentials of employees, contractors, and vendors, ensuring access approvals, security, privacy, and compliance across all locations.
